

DATEX II

Exchange 2020

Exploring Exchange specifications

6TH FORUM
WEBINAR SERIES

Please ask your questions in the Q&A

Overview

- DATEX II Docs website organisation <https://docs.datex2.eu>
 - Recall of Exchange Specification general information since Day 2 webinar
- PIM and PSM design
 - UML Diagrams
- Exchange Pattern specification insight
 - Snapshot Pull / Push (stateless exchange)
 - Simple Push
 - Stateful Push
 - Simple CIS
 - Stateful CIS
- PSM mapping
 - SOAP WSDL specifications

Exchange Specs
supporting DATEX II are
standardised under ISO & CEN
as
TS 19468
TS 14827-4

DATEX II

6th Forum Webinar series

Exchange Specs Rationale

- 2006 V1.0 release
 - Exchange PIM and PSM
 - Push and Pull wsdl
 - Snapshot http/get – Low Cost Profile
- 2012 V2.x release
 - Exchange reference to V1.0
- 2014-2016 started discussion on how to approach
 - Different scoping in CEN and ISO for Data Exchange frameworks
 - Competing standards were approaching in ISO
- 2018 – Exchange2018
 - After long design drafting Exchange 2018 to support DATEX II v3.0
 - ISO TS 19468 approved Oct 19 for Exchange Platform Indipendente Model
 - A few flakes: LCP not consistent with old LCP paradigm
 - Missing some features and CIS not described
 - Start revision to next complete TS for PIM and PSM
- 2020 – revised specs Exchange2020

DATEX II

6th Forum Webinar series

Exchange 2020

- Full PIM description for all Exchange Patterns

- Information Delivery

- Push & Pull

- Stateless Snapshot Pull & Push
 - Stateful with state and session management
 - Simple Push added for simplified use cases using push + link monitoring

- Several paradigm have been chosen to fit all more common use cases**

- Exchange Guide for FEP+EP selection driven by your use case

- Collaborative ITS Services

- Base methods to support coordination mechanism for collaborative traffic management among centres
 - Simple CIS → one shot
 - Stateful CIS → session management workflow

DATEX II

6th Forum Webinar series

Stateless Information Patterns

Sampled information

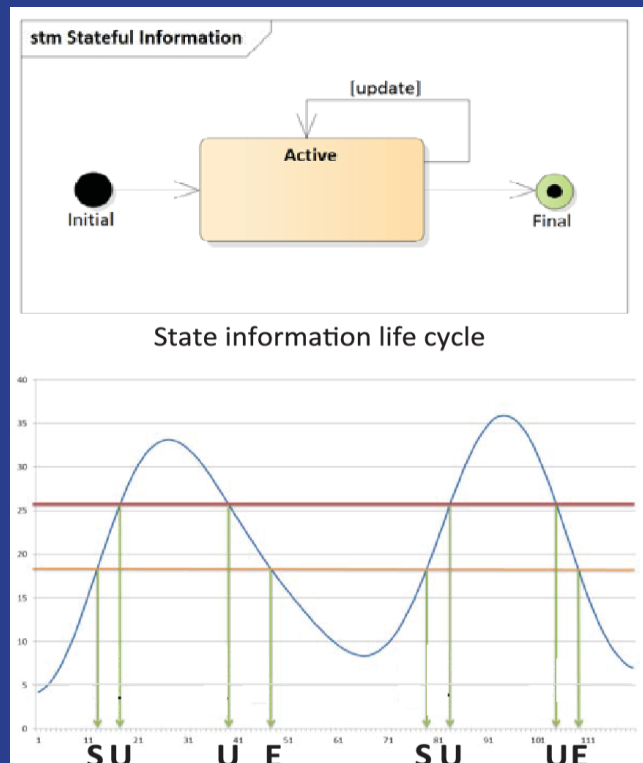

- Data are retrieved based on supplier logic triggering time
- **Stateless** information, any sample of data has its validity at time they are sampled
- Data Accuracy is managed in the sampling rate

DATEX II

6th Forum Webinar series

Lifecycle information pattern

- Threshold triggered information
- (Journalistic information)

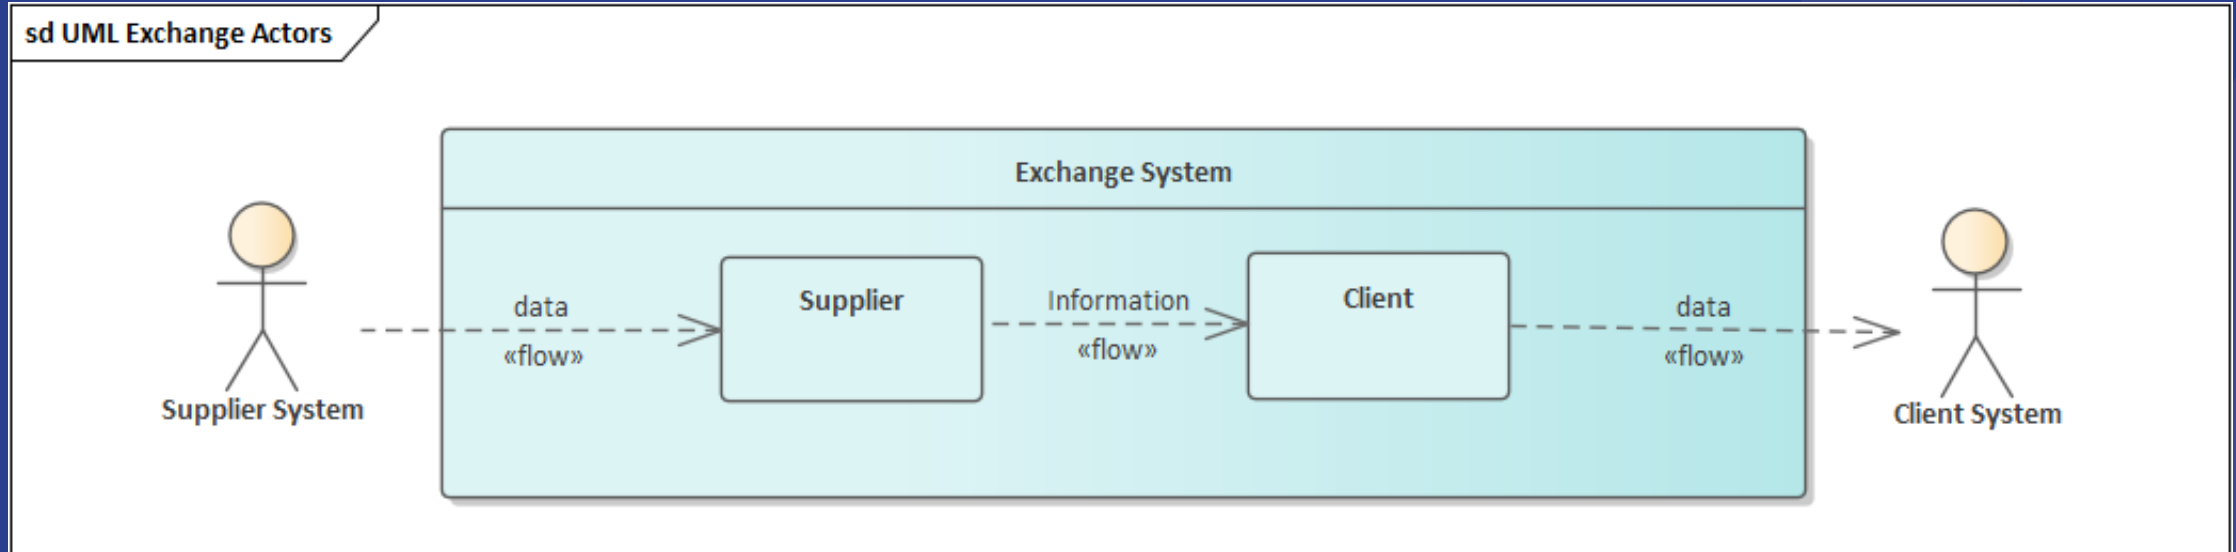

- Asynchronous information
- Information
 - start when condition is valid
 - updated for new condition valid
 - ends when the condition is not valid anymore
- Status condition and full lifecycle management
- Thus triggering status update among supplier and client

DATEX II

Exchange actors

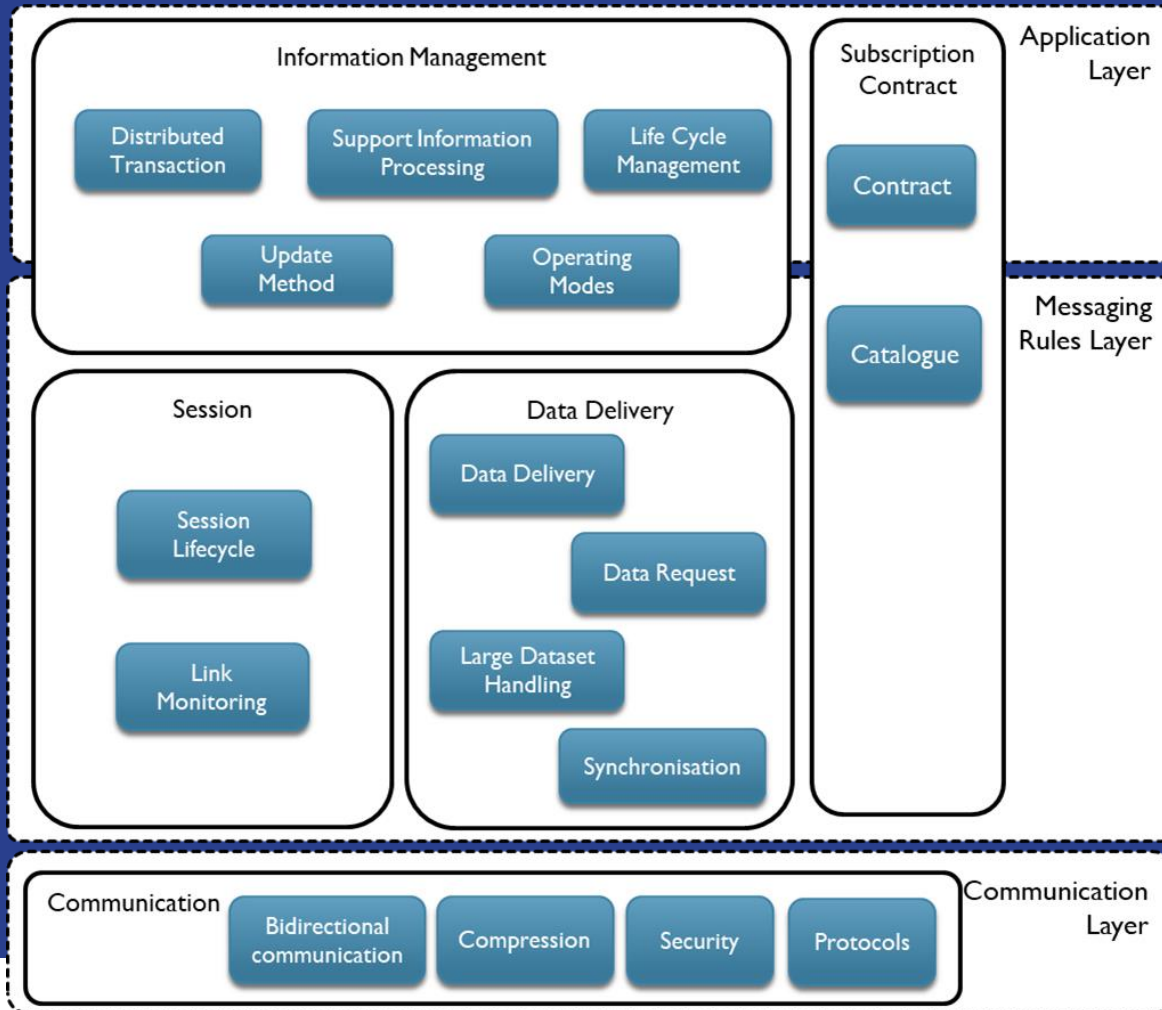

Gathers
information

Want to be synchronised
with updated
information

DATEX II

6th Forum Webinar series

Contex diagram and features

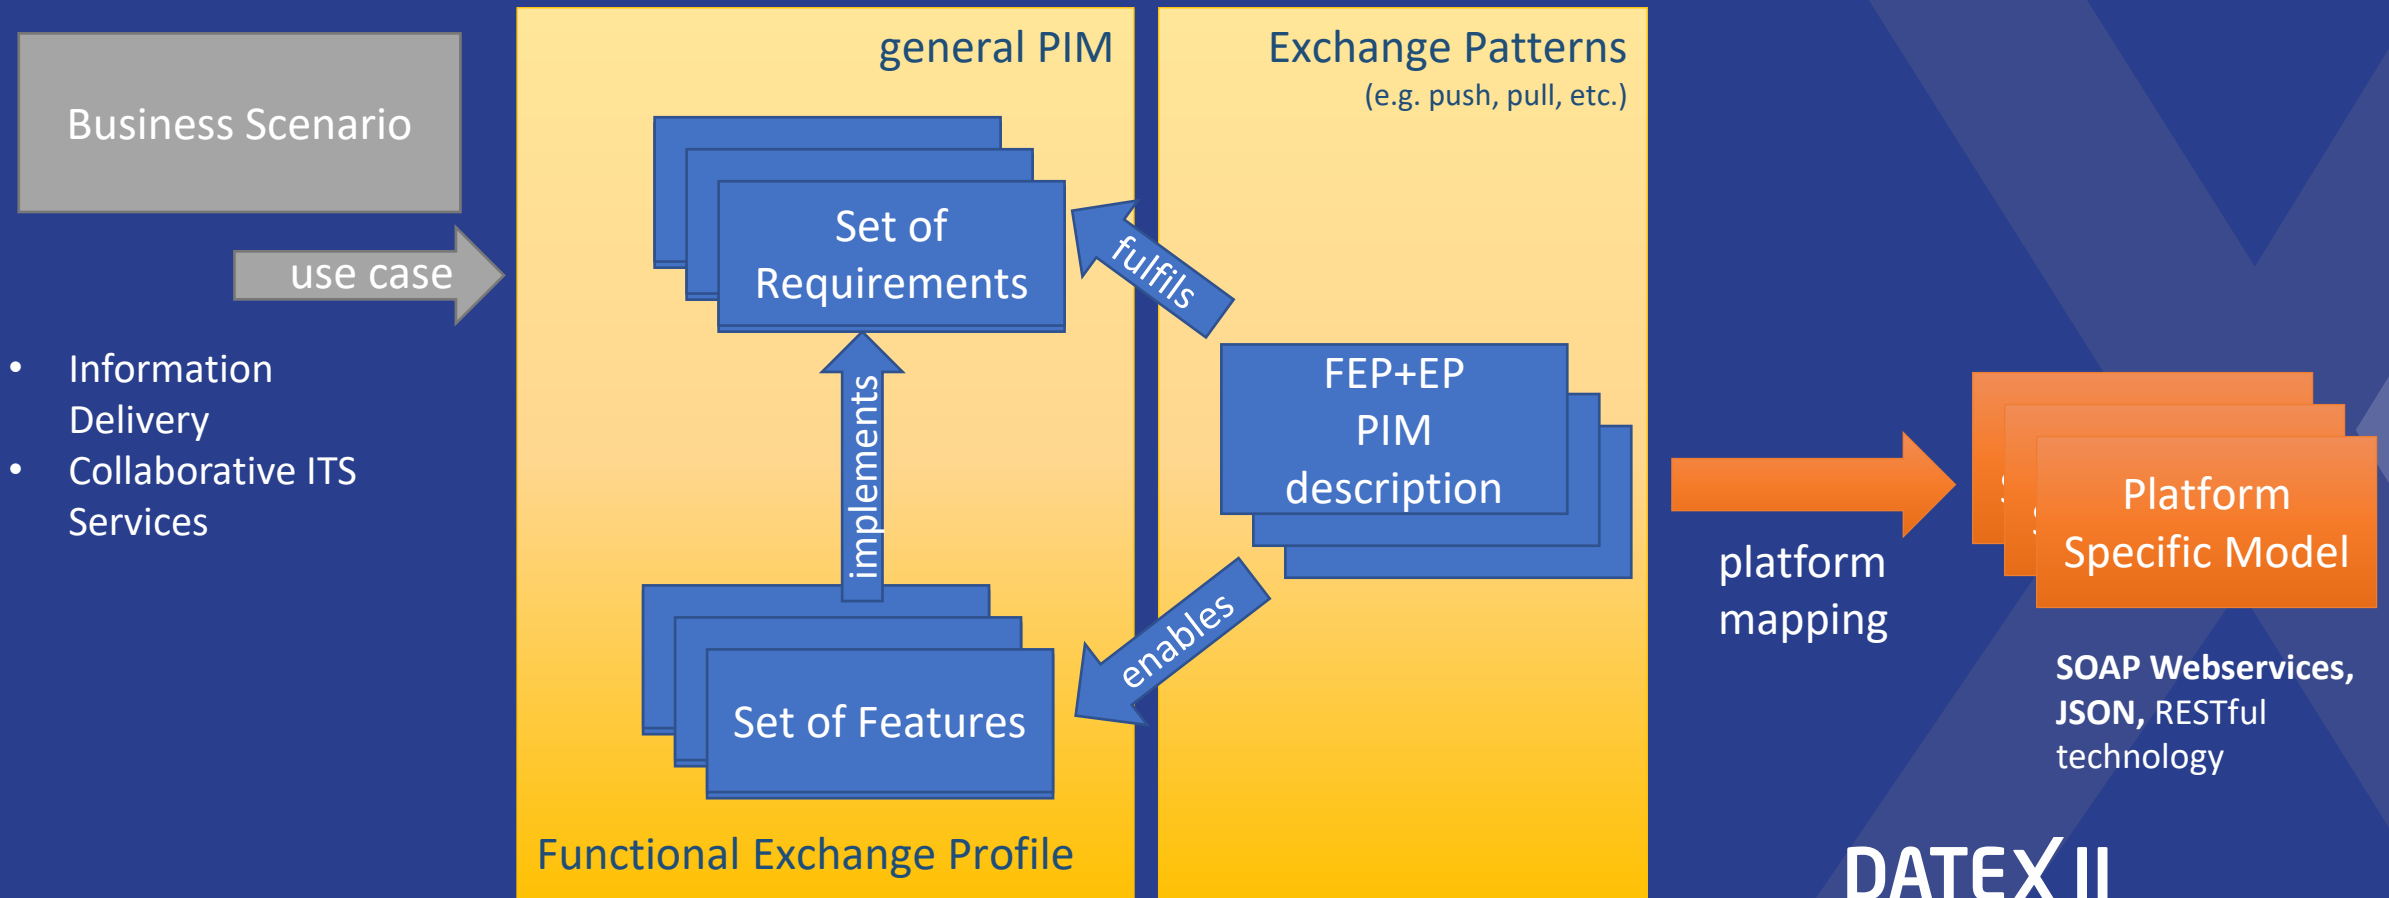

Exchange 2020

- deals with exchange features implemented to support Information Exchange and Collaborative ITS Services
- relies on Communication layer for their relevant features

DATEX II

6th Forum Webinar series

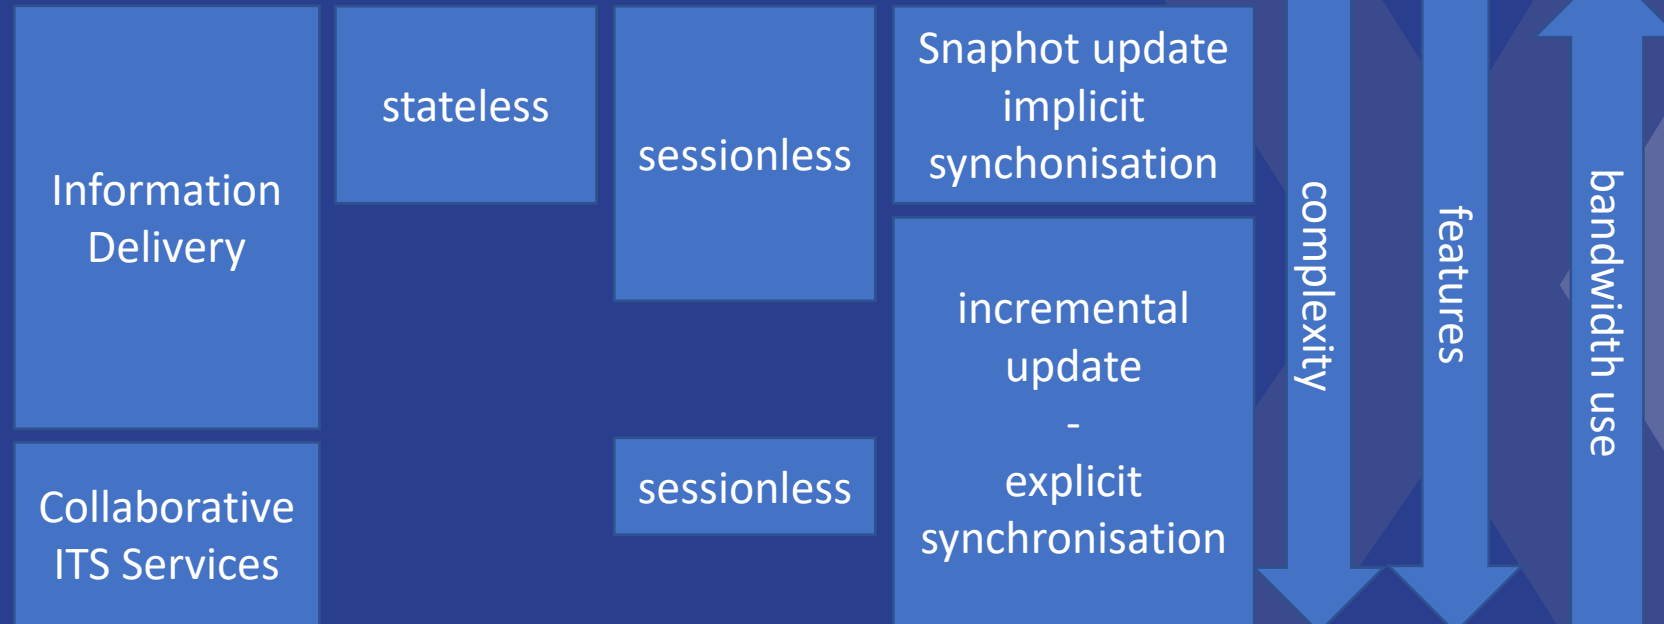

Model Driven Approach

Exchange Patterns and Functional Exchange Profiles

Selected EP+FEP to be used for DATEX II

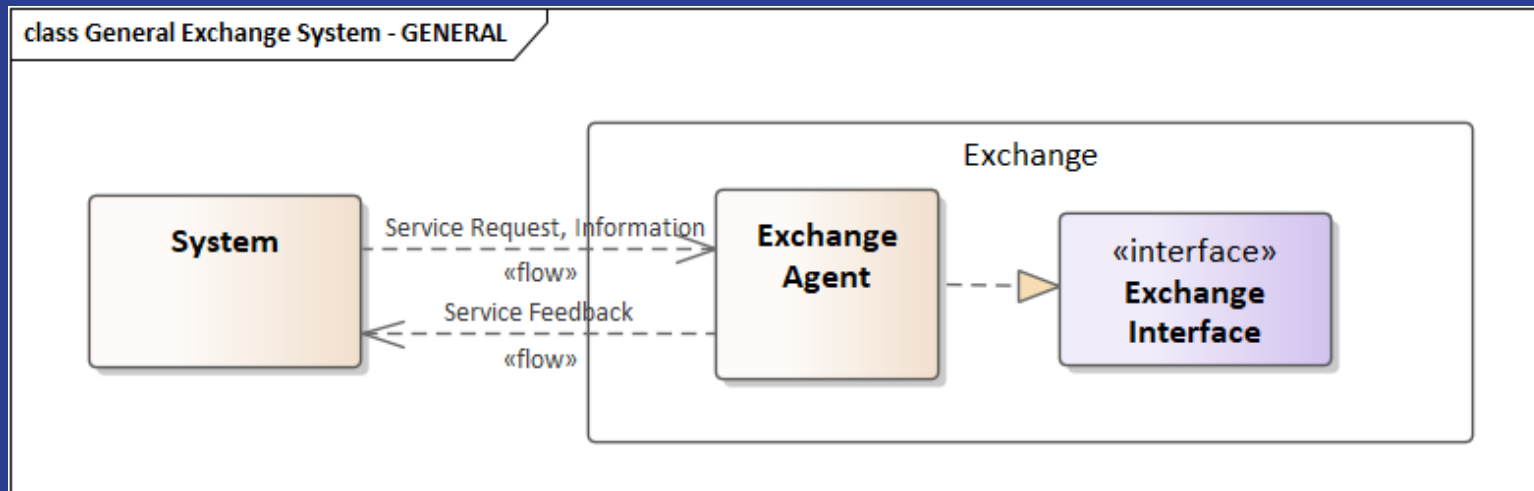

- Snapshot Pull
- Snapshot Push
- Simple Push
- Stateful Push
- Simple CIS
- Stateful CIS

DATEX II

Exchange Pattern description via UML Interface Diagram

DATEX II

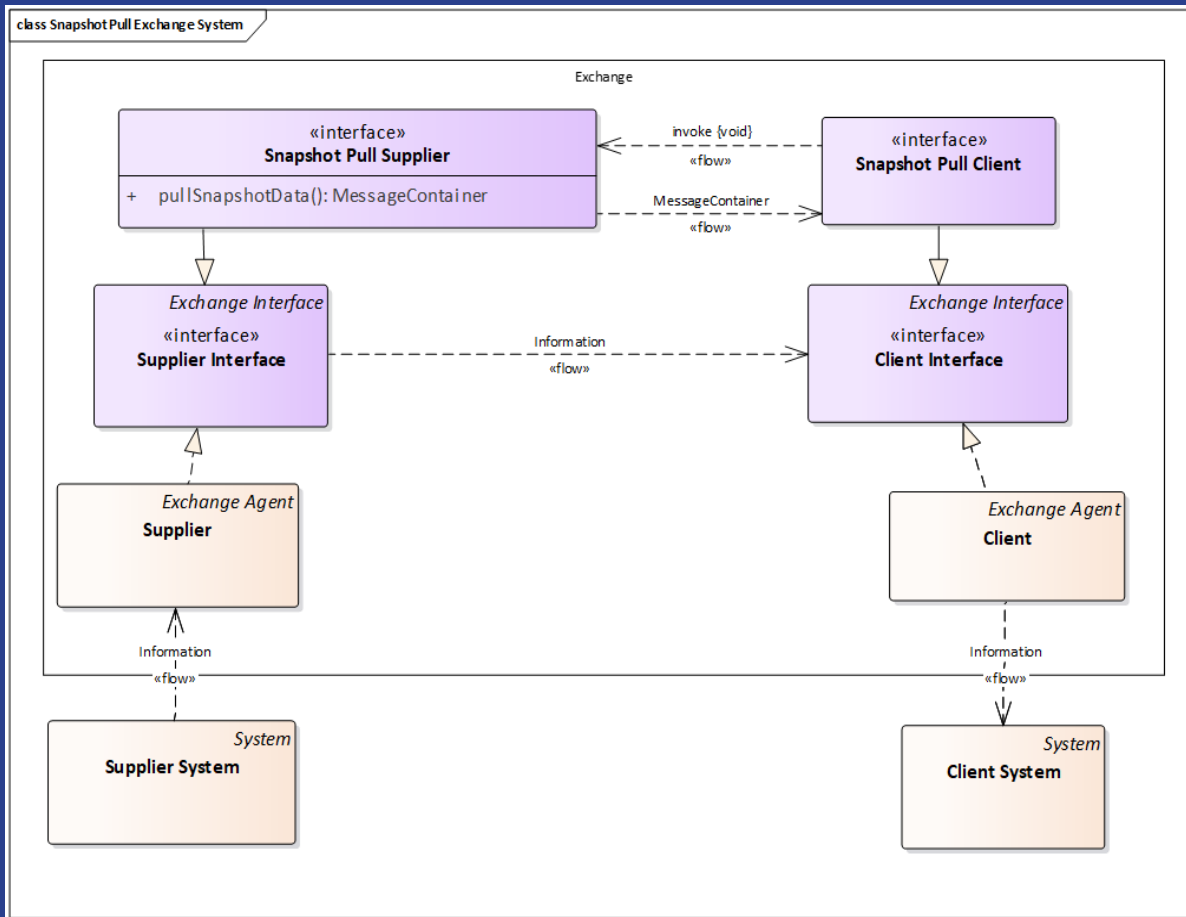

6th Forum Webinar series

Interface Description Information Delivery

TEX II

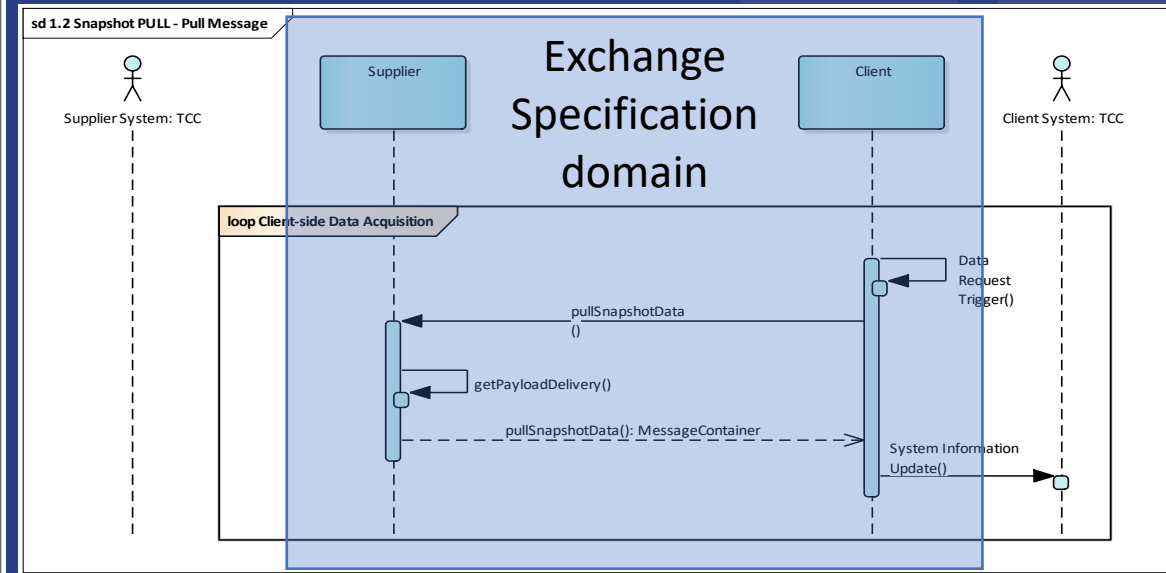

Snapshot Pull specialised Interface description

Client retrieves a snapshot of information, implicit synchronisation

1 simple method, void input

- pullSnapshotData

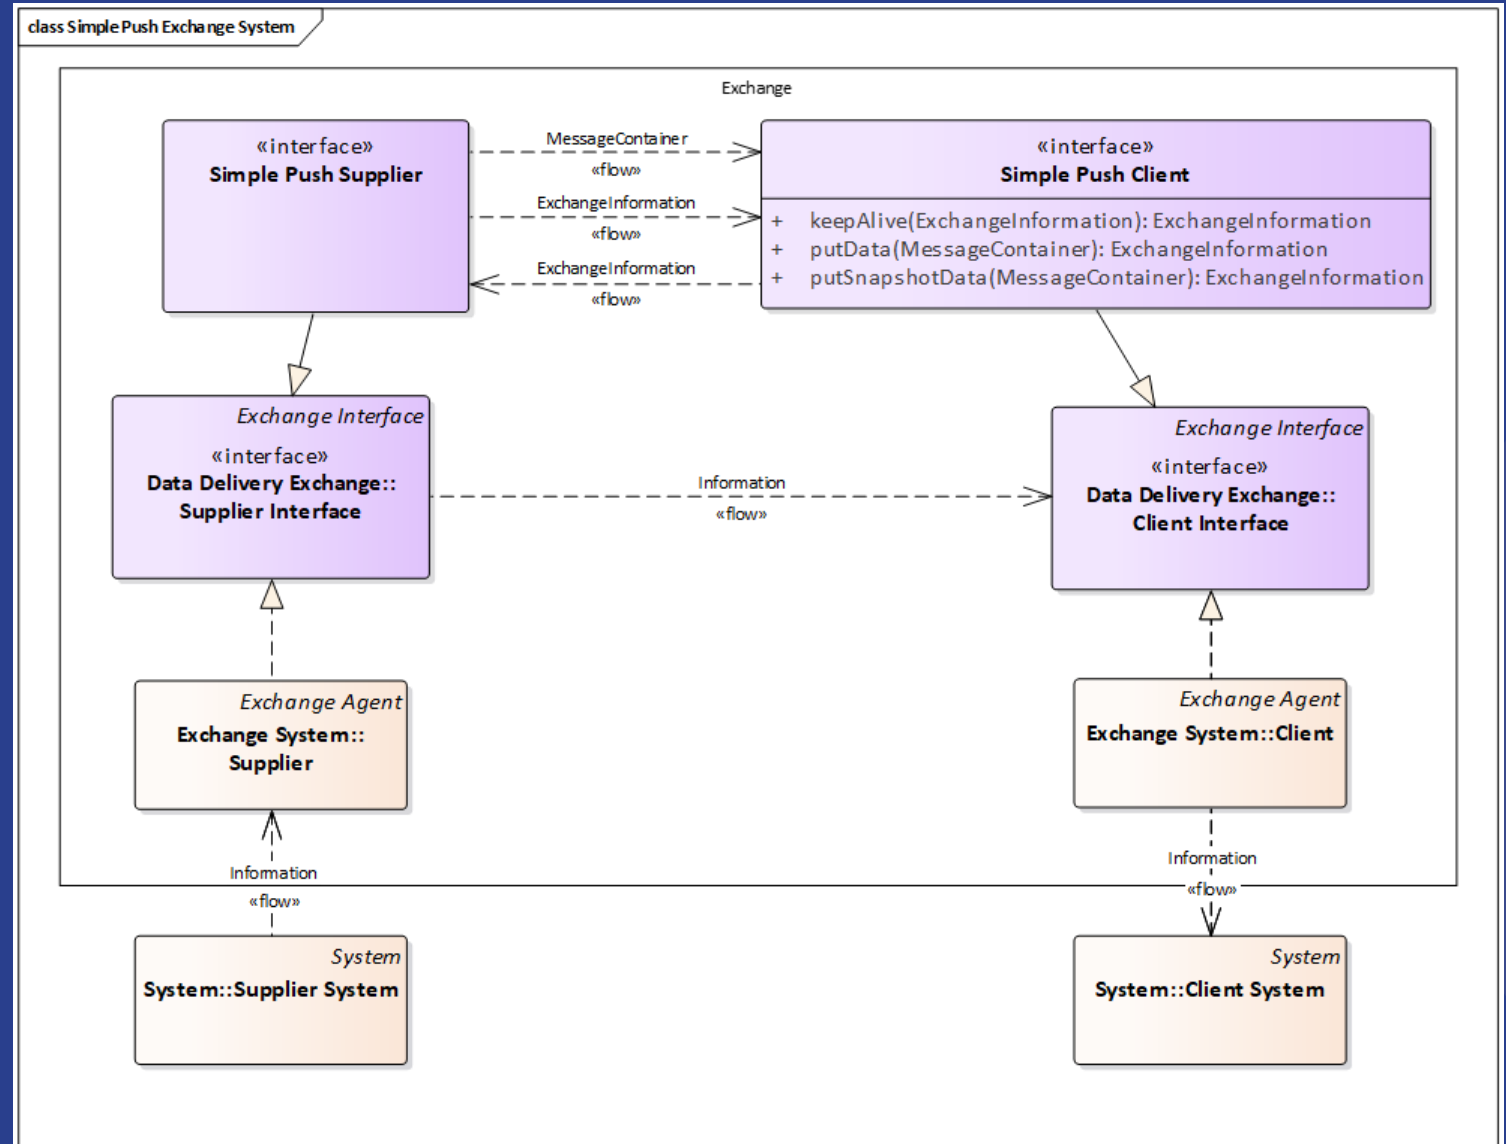

DATEX II

6th Forum Webinar series

Simple Push Interface Description

3 methods

- **putSnapshotData**
 - Explicit synchronisation vs implicit synchronisation in Snapshot Exchange Pattern
- **putData**
 - Depending on use case
 - All updated information, e.g. Measured data, Travel times
 - Single updated elements, e.g. situation, VMS Status, etc.
- **keepAlive**

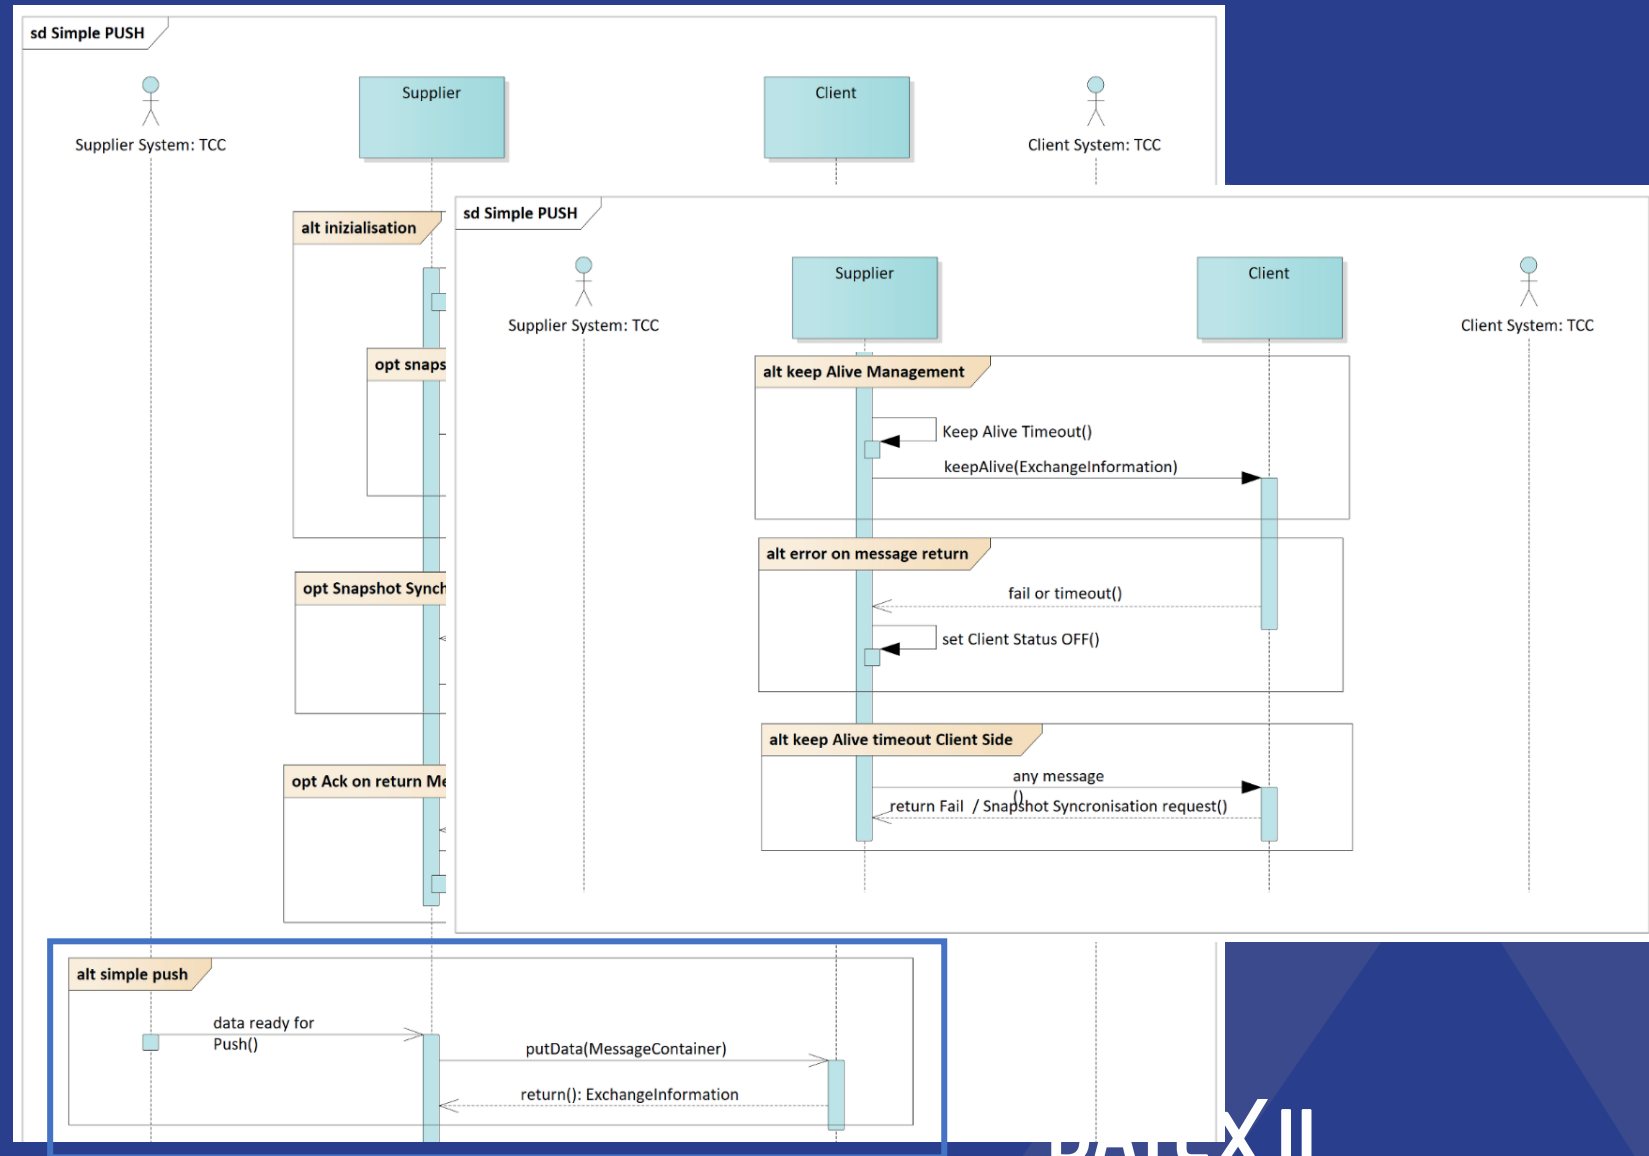

DATEX II

6th Forum Webinar series

Simple Push Sequence Diagrams

Supports the features implementation description

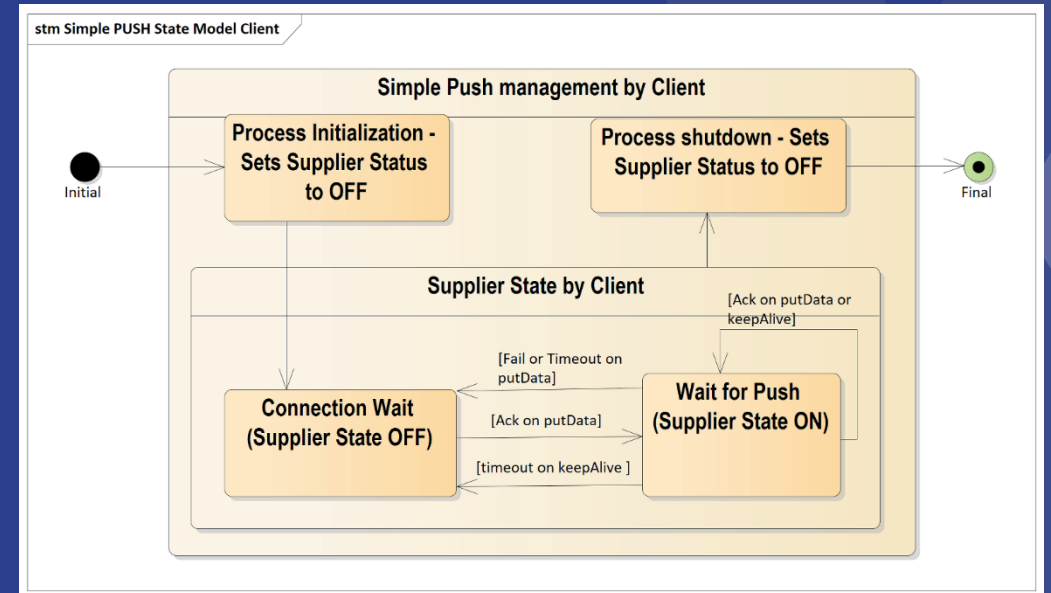

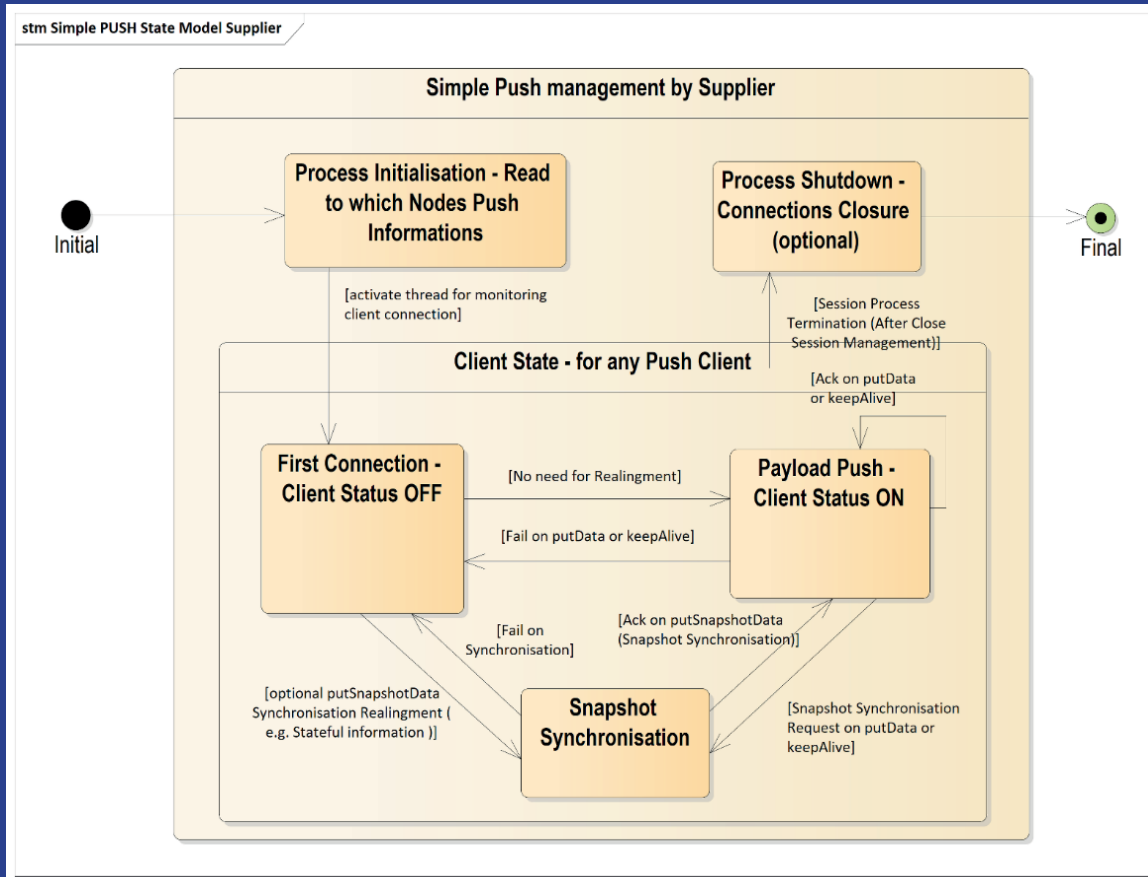

DATEX II

6th Forum Webinar series

Simple Push State Diagrams

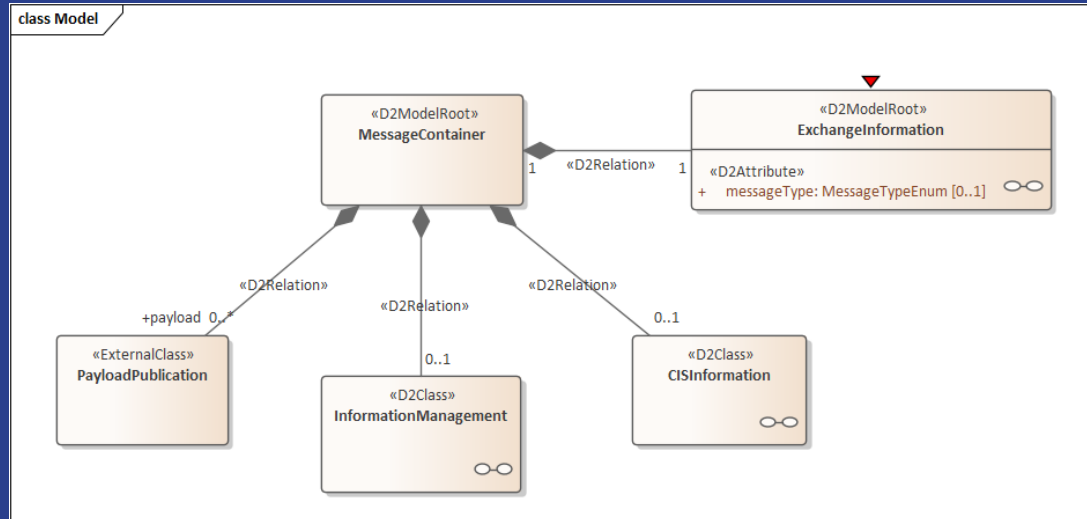

Supports the features implementation description

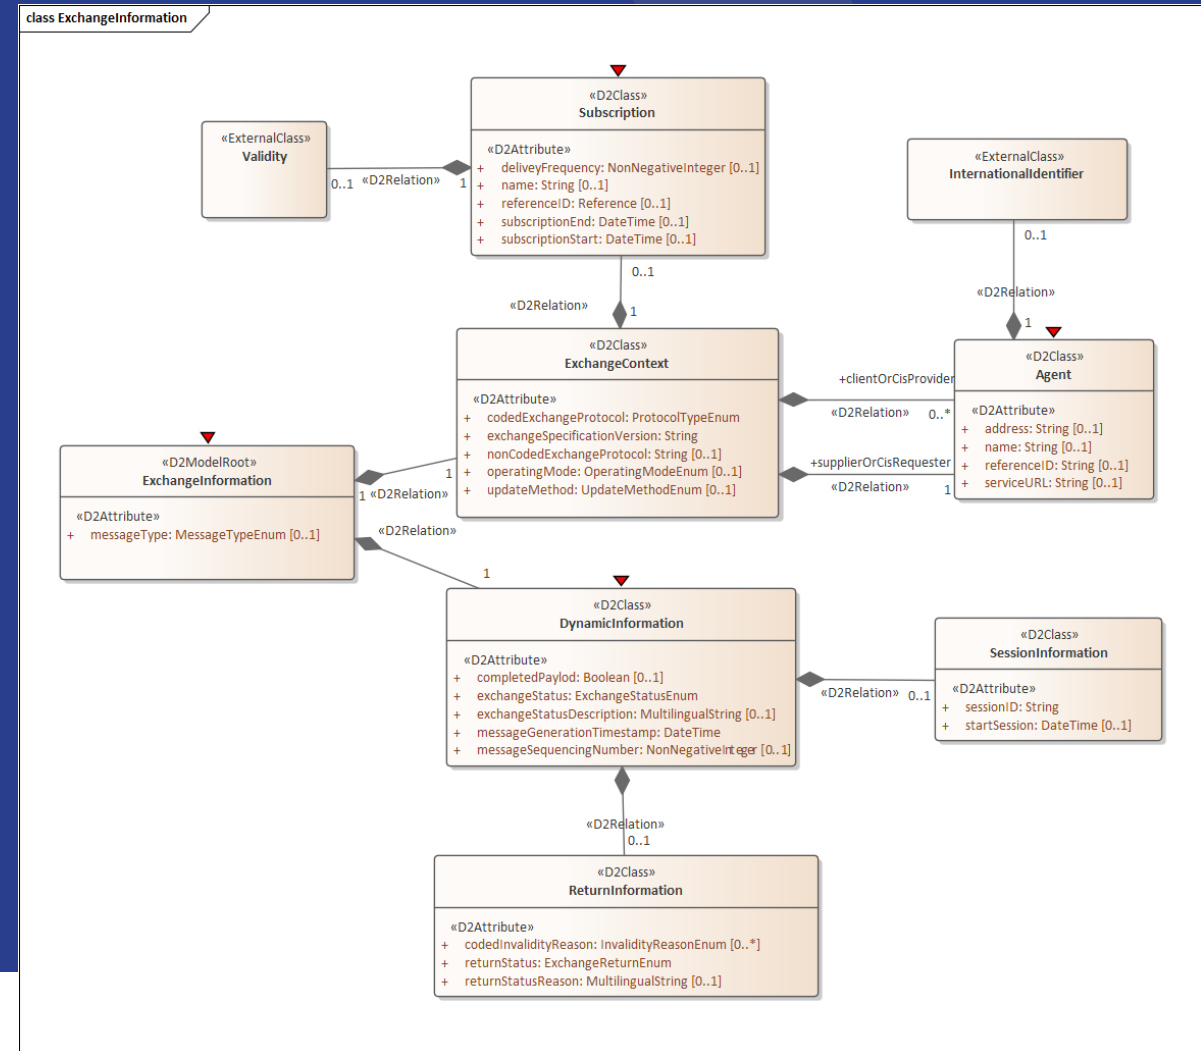

DATEX II

6th Forum Webinar series

Basic Exchange Data Model

- Exchange Information supports features implementation
 - Exchange Context static
 - Dynamic Information

PSM mapping

SOAP WSDL Implementation described at W3C.org

Web Services PSM mapping of FEP+EP PIMs

Platform Specific Model (PIM) specification to implement FEP+EP PIM based on WS SOAP technology is **mapping the abstract UML messages (invocation methods and data types)** defined at FEP+EP PIM level as UML collaboration and sequence diagrams to the corresponding SOAP WSDL methods and data structure.
